State	Finished
Completed on	Sunday, 19 October 2014, 12:40 PM
Time taken	1 min 49 secs
Marks	10/10
Grade	100 out of a maximum of 100

Question 1

Correct

Mark 1 out of 1

Flag question

Which AIDS-indicated category is associated with Kaposi's sarcoma?

Select one:

- ☐ a. Primary HIV infection
- ☐ b. Clinical Category 1
- ☐ c. Clinical Category 2
- ☐ d. Clinical Category 3
- ☒ e. Clinical Category 4 ✓

The correct answer is: Clinical Category 4

Question 2

Correct

Mark 1 out of 1

Flag question

Which of the following opportunistic infections presents as an oral thrush and can affect the whole gut leading to difficulties in feeding?

Select one:

- ☒ a. Oropharyngeal candidiasis ✓
- ☐ b. Cryptococcal meningitis
- ☐ c. Tuberculosis
- ☐ d. Pneumonia
- ☐ e. Toxoplasmosis

The correct answer is: Oropharyngeal candidiasis

Question 3

Correct

Mark 1 out of 1

Flag question

A HIV-infected patient has cough, fever, and sputum production for 4 days. A chest x-ray shows a left lower lobe infiltrate, the WBC is 4,200/mm³ and a CD4 count is 150/mm³. He takes no medication. The most likely microbial pathogen is:

Select one:

- ☒ a. *S. pneumoniae* ✓
- ☐ b. *P. carinii*
- ☐ c. *Mycobacterium tuberculosis*
- ☐ d. Cryptococcosis

The correct answer is: S. pneumoniae

Question 4

Correct

Mark 1 out of 1

 Flag question

People who have AIDS get opportunistic infections because:

Select one:

- ☐ a. The drugs used to treat HIV cause infections
- ☐ b. It is natural for people with AIDS to get opportunistic infections
- ☒ c. HIV weakens the immune system and makes it difficult to fight diseases ✓
- ☐ d. When HIV enters the body, it mutates into the disease agents that cause infections such as Pneumocystic carinii pneumonia and cytomegalovirus infection (CMV)

The correct answer is: HIV weakens the immune system and makes it difficult to fight diseases

Question 5

Correct

Mark 1 out of 1

 Flag question

A HIV-infected patient has cough, fever, and sputum production for 4 days. A chest x-ray shows a left lower lobe infiltrate, the WBC is 4,200/mm³ and a CD4 count is 150/mm³. He takes no medication. The most likely microbial pathogen is;

Select one:

- ☐ a. Cryptococcosis
- ☐ b. Peritonitis
- ☒ c. S. pneumoniae ✓
- ☐ d. Mycobacterium tuberculosis
- ☐ e. P. carinii

The correct answer is: S. pneumoniae

Question 6

Correct

Mark 1 out of 1

 Flag question

What clinical condition listed below is associated with what AIDS-indicated category? Kaposi's sarcoma

Select one:

- ☐ a. Clinical Category 2
- ☒ b. Clinical Category 4 ✓
- ☐ c. Clinical Category 1
- ☐ d. Clinical Category 3

The correct answer is: Clinical Category 4

Question 7

Correct

Mark 1 out of 1

 Flag question

All of the following are AIDS indicator conditions EXCEPT:

Select one:

- ☒ a. Herpes zoster ✓
- ☐ b. Greater than 10% cachexia
- ☐ c. Herpes simplex
- ☐ d. Cryptococcosis
- ☐ e. Kaposi's sarcoma

The correct answer is: Herpes zoster

Question 8

Correct

Mark 1 out of 1

 Flag question

Hairy leukoplakia is clinical condition associated with what AIDS-indicated category?

Select one:

- ☐ a. Clinical Category 2
- ☒ b. Clinical Category 3 ✓
- ☐ c. Clinical Category 1
- ☐ d. Clinical Category 4
- ☐ e. Window Period

The correct answer is: Clinical Category 3

Question 9

Correct

Mark 1 out of 1

 Flag question

What is the most common opportunistic infection in AIDS?

Select one:

- ☐ a. Cryptococcosis
- ☒ b. Pneumocystitis carinii ✓
- ☐ c. Tuberculosis
- ☐ d. Histoplasmosis

The correct answer is: Pneumocystitis carinii

Question 10

Correct

Mark 1 out of 1

 Flag question

All of the following are AIDS indicator conditions EXCEPT:

Select one:

- ☐ a. Herpes simplex
- ☐ b. Kaposi's sarcoma
- ☒ c. Herpes zoster ✓
- ☐ d. Cryptococcosis

The correct answer is: Herpes zoster
